
Hourly CFE score (a) and emission intensity (b) of the consumption of a 6000 MW data center in Aragon, one cell per 1-hour snapshot (UTC). CFE score: the share of consumption covered by the data center's PPAs and battery plus the renewable share of its grid purchases (import-traced, nuclear excluded); annual mean 99%. Emission intensity: its grid purchases valued at the hourly emission factor of Spanish supply (imports traced to their exporter's mix), per kWh consumed; annual mean 3 gCO2/kWh.
